OMNISERVICE CENTER

One Smart Place for Every Service.

A Smart Digital Service Ecosystem for Discovering, Connecting, Managing, and Accessing Services

COMPUTER SCIENCE / SOFTWARE ENGINEERING

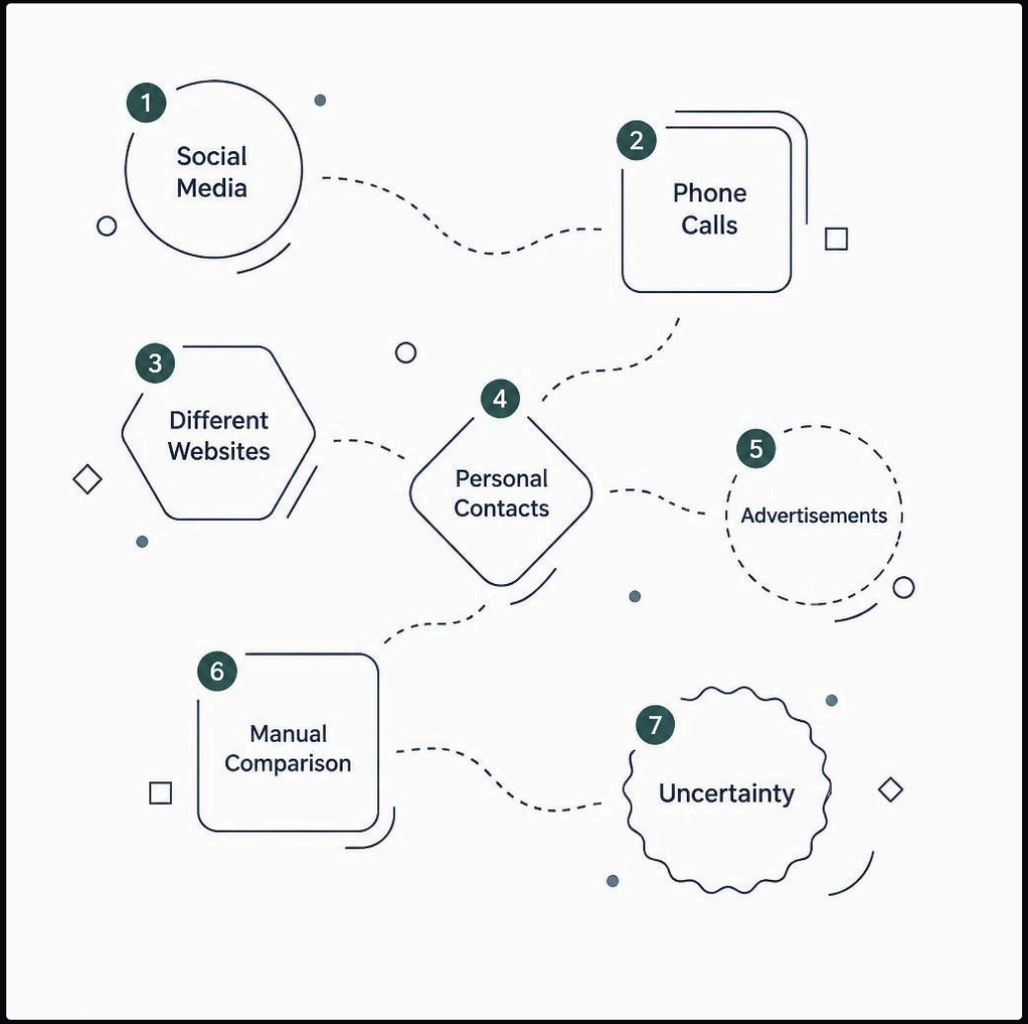

SCIENCE FAIR COMPETITION

ABRHAM KEFYALEW & TEAM · GRADE 12

Made with GAMMA

The Service Exists. The Connection Is the Problem.

The Seeker's Reality

Services are everywhere — but finding the right one, verifying trust, and managing the interaction is fragmented and unreliable.

The Provider's Reality

Qualified providers have limited visibility and no structured way to reach potential customers.

There is a gap between **service need** and **service provider.**

Made with GAMMA

What If Finding a Service Were as Simple as Finding a Product?

Before

Fragmented discovery across social media, phone calls, personal contacts, and scattered websites

After

One smart ecosystem — discover, connect, book, and review in a single place

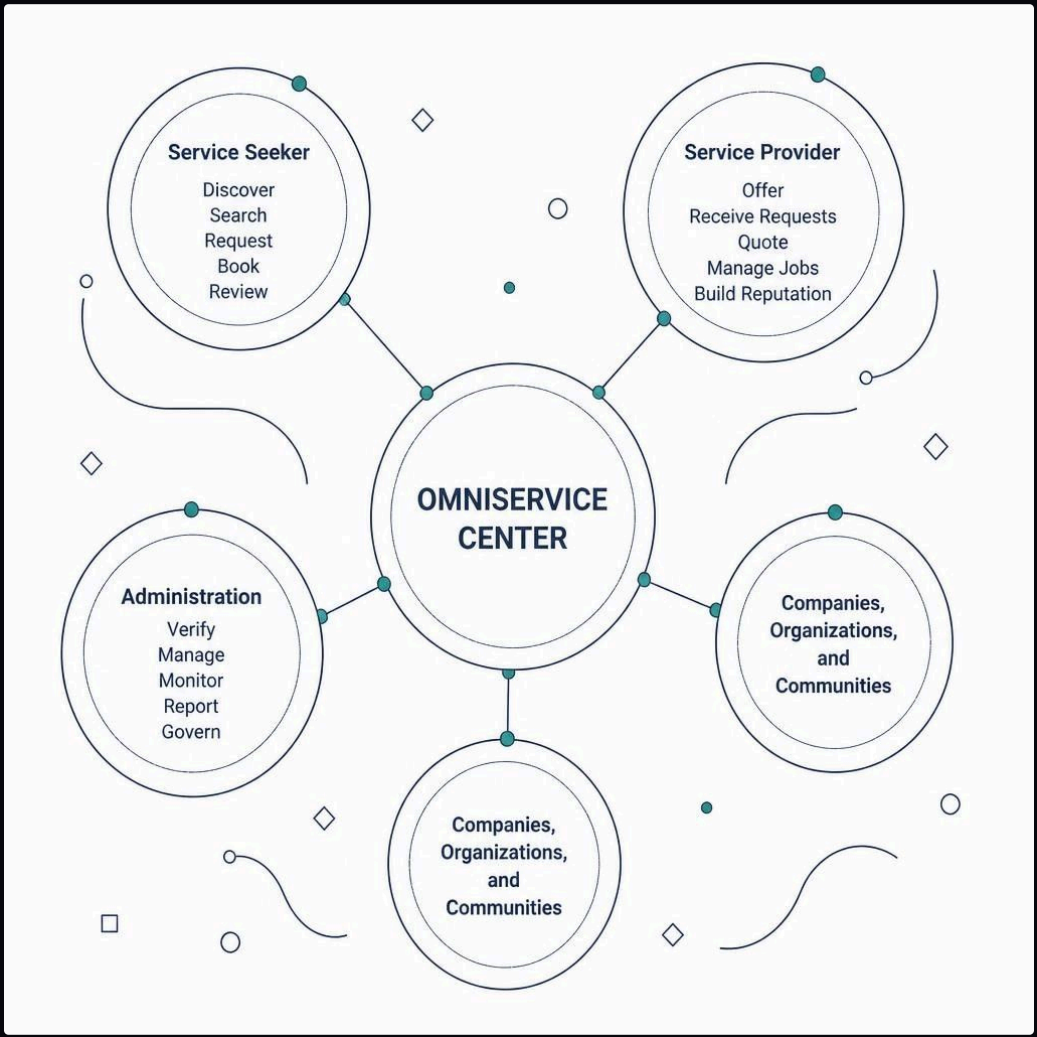

The service you need may already exist. The provider you need may already exist. **The challenge is connecting the two.**

Made with GAMMA

One Platform. Three Core Sides.

Designed as an Ecosystem

OMNISERVICE CENTER is not simply a directory. It is a connected platform where seekers, providers, and administrators interact in a structured, trust-enabled environment.

- **Seekers** discover and access services with confidence
- **Providers** gain visibility and manage their work
- **Administrators** govern, verify, and maintain quality

Meet OMNI

Turning a service request into a provider match.

OMNI is a specialized natural-language service-matching engine using service intent, synonym mappings, location, timing, trust, availability, price level, review information, and geographic distance.

Current prototype: rule/scoring-based intelligence. Future: advanced NLP/ML.

Made with GAMMA

From "I Need a Service" to "Service Completed"

1. Discover
2. Match
3. Select
4. Request
5. Quote
6. Accept
7. Book
8. Complete
9. Review
10. Trust

Example: Computer Repair in Gondar → Provider Match → Service Request → Quotation → Booking → Completion → Review

We don't stop at discovery. We connect the **entire service journey.**

Made with GAMMA

Built for a Real Service Experience

🔒 Trust

Provider verification, trust indicators, service history, and review system

📍 Smart Map

Leaflet + OpenStreetMap integration with geographic relevance and provider locations

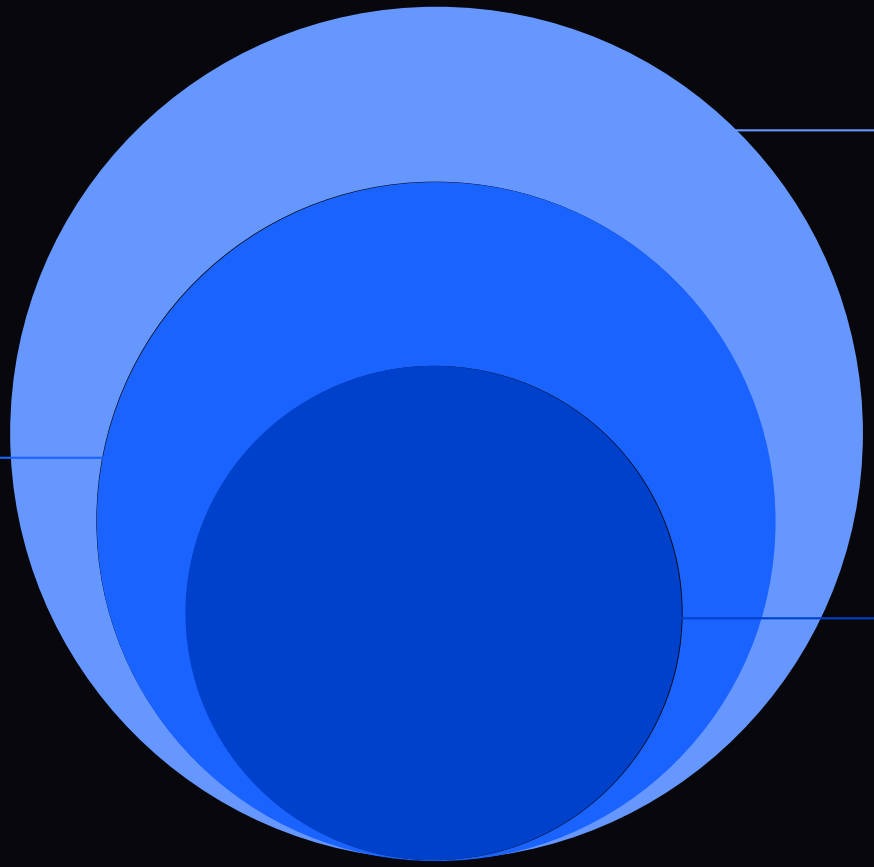

💳 Payment

Payment workflow — **DEMO / SANDBOX** — validation and demonstration only

ⓘ Map coordinates are prototype/demo data associated with Ethiopian locations. Payment is sandbox-only — no real transactions processed.

Made with GAMMA

Behind the Experience

Core Services & Data

OMNI Matching, Trust, Requests, Bookings, Payments, JSON datastore

Backend API

Node.js and Express service endpoints

User Interface

HTML, CSS, JavaScript interaction layer

This is not only a visual prototype. The system contains working interaction between frontend, backend, data, authentication, matching, and workflow components.

Made with GAMMA

What Exists Today. What Comes Next.

Current Prototype

- Authentication & role-based access
- OMNI matching engine
- Provider workflow & requests
- Quotations & booking
- Reviews & trust system
- Map integration & admin panel
- Payment sandbox

Future Development

- PostgreSQL & production infrastructure
- Advanced NLP / ML for OMNI
- Real provider verification
- Real payment integrations
- Mobile applications
- Expanded Ethiopian coverage
- Fraud prevention & analytics
- Production security & scaling

Made with GAMMA
